

## Technical Data Sheet

### GT-6125 Thixotropic Additive

GT 6125 is a one to three percent by weight additive that is specifically formulated for brush on molding. After mixing into any GT Products condensation silicone systems the silicone will thicken to a creamy, butterable product that can easily be brushed on to vertical or overhead surfaces without sagging or running. A thin layer of non-thixotropic silicone material should be applied first as a print coat to capture detail and achieve a bubble free surface. GT-6125 will not effect the curing process but will immediately react and thicken. Because GT-6125 is designed to react with the silicone base you must first fully mix the silicone base with the catalyst before adding the thixotropic additive.

#### Uses:

Hobby and art projects  
Rapid Prototyping

Sculpture and Figurines  
Special Effects

Candle and Soap Molds  
Taxidermy
